

Wealthscope: Knowledge Base

Wealthscope Portfolio Scorecard

Your portfolio will be given an overall letter and percentage grade, as well as graded on **5** important portfolio dimensions: **risk-adjusted performance**, **downside protection**, **diversification**, **fees**, and **income**.

Wealthscope scores a portfolio in each dimension based on how well the portfolio has performed during the specific time period in question. This period is dictated by how far your securities go back in history. If your securities are relatively new, Wealthscope will still perform most of the analysis, but it will be more limited in scope, and the scorecard must be interpreted with caution. Your portfolio is analyzed against a benchmark, which is selected automatically depending on which one of the eleven asset allocations your portfolio is closest to (100% equity, 90% equity 10% fixed income to 10%

equity 90% fixed income, 100% fixed income). The default equity benchmark is the S&P 500 but you can choose a global equity or custom benchmark instead (at the top right of the Overview page).

Performance – an evaluation of past performance based on risk-adjusted returns as well as annualized returns relative to a benchmark, which is a portfolio that has a similar asset allocation to stocks and bonds. A higher score is more desirable.

Downside Protection – an evaluation of the portfolio's ability to limit losses when there is a stock market downturn. Downside capture, maximum drawdown, and downside risk relative to the benchmark portfolio are used for this score. A higher score is more desirable.

Diversification – an evaluation of your portfolio's ability to diversify risk, scored in terms of the portfolio's average pairwise correlation and the following 4 dimensions, across: regional stock markets, macroeconomic factors, global business sectors, and asset classes. A higher score means that your portfolio's risk exposures are more spread out. A higher score is more desirable.

Fees – an evaluation based on your portfolio's weighted average management expense ratio (MER). MER is a fee charged by ETFs and mutual funds. Depending on the series (e.g., A), it may include a trailing commission that compensates your advisor. You will not typically see the MER on your statements as performance is reported net of the MER. Note that any additional advisory or trading fees you may incur are not included in this score. Also note that when a MER is unavailable for a given ETF or mutual fund, it will be replaced by the category average; this will be indicated in a message to the right of the MER value. Assuming a maximum MER of 3%, a higher score indicates lower fees, and is thus more desirable.

Income – if you are looking for income such as dividends or other distributions from your investments, Wealthscope provides an income score. It is the weighted average yield of your portfolio, and the maximum is set at 5%, meaning that a portfolio that has a yield of at least 5% will receive a score of 100%. A higher score represents a higher portfolio yield.

Wealthscope's portfolio scorecards are objective and are based on an empirical evaluation of each portfolio dimension. They provide a useful tool for analyzing and comparing portfolios within the same risk category or asset allocation in order to identify opportunities for further research. They should not be considered recommendations to buy or sell individual securities or portfolios. Finally, the usual disclaimer applies – past performance is not necessarily indicative of future performance.

There are four integrated segments for you: **PORTFOLIOS**, **SIMULATION**, **PLANNING**, and **TOOLS**.

PORTFOLIOS

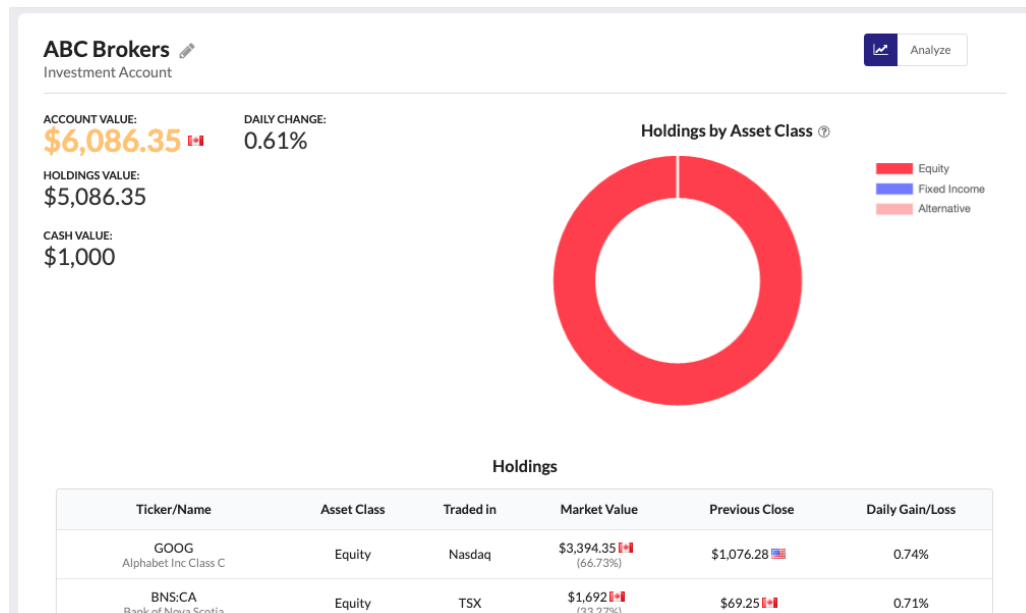

See a consolidated view of your Streamer portfolios, and more importantly, have them analyzed. The securities currently supported in the analysis are US stocks, ETFs, and mutual funds; values are updated daily.

1. The landing page displays tabs of your individual Streamer portfolios (previously added on Quotestream), and an 'Overview' tab which is a *consolidation* of portfolio information across

all Streamer portfolios. Toggle 'Group portfolios for analysis' to select a specific group of portfolios for analysis. Once you are done selecting portfolios, click 'Group Overview'.

2. Click on a Streamer portfolio tab to view a *portfolio dashboard* with basic portfolio information.

3. To see your **Wealthscope portfolio scorecard** for your Streamer Portfolio click the 'Analyze' button in the top right corner on the portfolio dashboard view.

4. Compare your portfolio with a **simple model portfolio** in the same risk category or with a portfolio you have saved in the **SIMULATIONS** segment on Wealthscope previously. This function (the 'scale' icon) can be found on the red panel of the portfolio scorecard on the left-hand-side.

SIMULATIONS

2 different portfolio builders are offered:

- **ETF Portfolio Builder:** Pick your own asset mix from different asset classes. You can see the ETFs that track each asset class by clicking the 'Execute' button on the red panel of the portfolio scorecard.
- **Custom Portfolio Builder:** Test your own portfolio ideas by selecting any

US stocks, ETFs, and mutual funds by inputting their tickers and corresponding weights. There is also the option to include a weighting allocated to cryptocurrency, specifically Bitcoin and/or Ethereum.

1. Select the **SIMULATIONS** segment to view the **SIMULATIONS** landing page. Two features are available: 'Create New', and 'View Saved'.

2. Select 'Create new' to see the portfolio builders. Once built, all portfolios will automatically receive a **Wealthscope portfolio scorecard** and you can compare them to **5 simple model portfolios** or your Streamer portfolios.
 - You can **save/edit** these portfolios using the buttons on the left-hand-side panel of the Wealthscope portfolio scorecard. Once saved, you can use them for benchmarking against your actual investments or against other portfolios, or for use in 'Target Saving' feature in **PLANNING**. You may also compare your portfolio, as mentioned above.

3. Select 'View Saved' to see portfolios you've saved from portfolio builders.

PLANNING

There are crafted tools for the accumulation phase of retirement planning, such as calculating target wealth at retirement, and monthly target savings. Additionally, the target saving tool is multi-purpose and can be used for general financial planning, such as saving for your children's education.

1. Select the **PLANNING** segment to view the Accumulation landing page. Two features are available: 'Target Wealth' and 'Target Saving'.

2. Select 'Target Saving' to calculate required monthly savings for any financial goal - not just retirement planning.
3. Select 'Target Wealth' to determine the accumulated savings needed by your desired retirement age. You will see three different figures at varying likelihood of success.
